

Biometric Systems

Degree Offered

- Associate of Arts

Nature of Program

Biometric systems use specific traits about an organism to identify it. Biometric systems engineers design hardware and software to measure a signature trait of the human body, compare that signature to a database, and then render a decision from a matching process. Biometric systems are being used in positive personal identification in law enforcement, access control, banking and a wide range of business and administrative systems. Biometric systems can also be used in health care for identification of specific human conditions via implantable devices and the automated administration of life-saving medical therapies. Biometric systems can also impact our daily lives with advances in integrated sensors, signal/image processing, computer and mass storage technology that allow inanimate objects to identify, interact with and assist their users.

The associate degree program provides the foundation to complete a bachelor program in biometric systems at West Virginia University. Students planning to enter a bachelor program at another institution should determine the transfer equivalencies for the courses offered at Potomac State College of WVU and the institution they plan to attend following completion of the associate degree program

Career Opportunities

Biometric system engineers typically work in the IT security industry for businesses and other organizations that design and use data defense methods. Employment can also be found at firms specializing in forestry, forensics, and health care.
