

Counseling and Mental Health, B.A.

Degree Offered

- Bachelor of Arts

Nature of the Program

The Counseling and Mental Health Program is designed for students with a broad-based interest in the human condition and serving their communities. Graduates are qualified for entry-level occupations in addiction, mental health and family support services, and are also prepared for graduate studies in counseling, occupational therapy, public health or other health-related disciplines.

The core coursework explores the history, theories and concepts of mental health and mental illness, as well as investigation of the structures and service delivery mechanisms for prevention, intervention, and treatment of mental disorders, with a concentrated focus on addiction and recovery. Through selection of certain elective groups, students also have the opportunity to build deeper knowledge in disabilities, aging, wellness, and/or diversity.

The program culminates with a capstone course designed to help students integrate and synthesize their CMH coursework through a field experience and population research.
