Physics and Astronomy

Degrees Offered

- Bachelor of Arts
- Bachelor of Science

Students may not earn both a B.A. and a B.S. in Physics.

Nature of the Program

There are two degree options for students in physics. The bachelor of science degree is designed for students committed to a career in research. It can be followed by graduate work in physics, chemistry, materials science, optical sciences, astrophysics, engineering, or in other physical sciences such as meteorology, oceanography, etc. Some students instead pursue positions in industry or in a government laboratory immediately after completing the B.S. This degree program provides a comprehensive grounding in the fundamentals of physics and is usually accompanied by participation in one of the active research programs within the department.

The bachelor of arts degree is designed to prepare students for a career that utilizes physics preparation in conjunction with an applied emphasis. By allowing more free elective choices, it prepares a student for a career that combines a science background with subsequent professional training. Typical career paths for this degree program include teaching, medicine, dental school, medical school, patent law, forensics, health physics, environmental engineering, science journalism, government policy, and business management.

The courses in physics provide a mix of theoretical concepts and practical examples. Each course within a degree plan builds upon the knowledge base acquired in previous courses and, together, these courses allow a student to acquire the combination of physical insight and mathematical skill needed for success in today's demanding job markets.

The department also offers introductory survey courses in physics and astronomy that are of interest to a broad range of students in the social sciences, fine arts, humanities, health sciences, and education. These courses use a minimum of mathematics to introduce the principles of physics and they provide many examples from the “real world” of the environment, energy, space, communications, transportation, and medicine.

For the B.S. degree, an Area of Emphasis is required. The Professional Preparation Area of Emphasis is the typical plan of study for graduate study in physics. Recommendations for the other areas of emphasis include:

APPLIED PHYSICS

Capstone research/senior design project must emphasize an applied physics topic. Students interested in completing this area of emphasis are encouraged to consider these courses as general electives: EE 311 Junior Instrumentation Lab; CPE 310 & CPE 311 Microprocessor Systems and Microprocessor Laboratory.

SPACE PHYSICS

Capstone research must emphasize a space physics topic. Students completing this area of emphasis are encouraged to consider the following courses as elective choices: PHYS 340 Experimental Space Physics; EE 223 Electrical Circuits & EE 224 Electrical Circuits Laboratory.

BIOPHYSICS

CHEM 233 & 235 are highly recommended for students interested in studying polymers.

MEDICAL PHYSICS

Capstone research must emphasize a medical physics topic. Students interested in this area of emphasis are encouraged to consider these courses as electives: BIOL 219 The Living Cell; BIOL 310 Advanced Cellular/Molecular Biology. Students considering medical school are encouraged to take CHEM 233 Organic Chemistry & CHEM 235 Organic Chemistry Laboratory in place of CHEM 231, and follow with CHEM 234 Organic Chemistry & CHEM 236 Organic Chemistry Laboratory as elective courses.

Minors

All students have the possibility of earning one or more minors; view a list of all available minors and their requirements (http://catalog.wvu.edu/undergraduate/minors) here. Please note that students may not earn a minor in their major field.

Certificate of Global Engagement

Students in the Eberly College, regardless of their major, can earn a Certificate of Global Engagement. Completion of the Certificate demonstrates the student’s knowledge of diverse cultures, as well as the ability to communicate and interact effectively with people of different cultural backgrounds. Students will be required to apply their knowledge of contemporary issues and global social contexts to their course work and their broader citizenship. For details regarding Certificate requirements, please visit the Eberly College page (http://catalog.wvu.edu/undergraduate/eberlycollegeofartsandsciences/#otherdegreeext).

2. An ability to perform accurate measurements of physical systems and communicate the results and implications of those measurements orally and in writing.
3. An ability to develop experiments to test basic or applied research questions, to perform accurate experimental measurements, and to critically evaluate others’ answers to research questions.
4. Preparation for success in graduate school or in a post baccalaureate career.

Upon successful completion of the B.A. degree, Physics majors will demonstrate:

1. An understanding of and ability to solve basic conceptual and quantitative problems in foundational physics areas and to apply complex reasoning and problem solving skills developed in physics across disciplines, with focus on such application in a cognate area.
2. An ability to perform accurate measurements of physical systems and communicate the results and implications of those measurements orally and in writing.
3. An ability to develop experiments to test basic or applied research questions, to perform accurate experimental measurements, and to critically evaluate others’ answers to research questions.
